

Aastra Solidus eCare™ Lite

Consumers today expect more from the companies they do business with than ever before. Solidus eCare™ Lite is Aastra's solution for enterprises that need a smaller call center.

It is based on the same skills-based routing functionality as our multimedia contact center solution, making sure that the appropriate agent is contacted.

Solidus eCare™ Lite includes voice agent functionality for up to 50 agents, and features desktop integration and soft phones. For administration and management of your call center, it includes Report Manager for reports, Information Manager for real-time data and Configuration Manager for user administration.

Included in Solidus eCare™ Lite

Desktop Manager – Provides call control capabilities to agent desktops.

Soft phone – Enables agents to use IP/SIP soft phones for all call control features, thereby eliminating the need for physical telephones. This provides agents with greater mobility as well as a more economical overall solution.

Messaging & Directory site – Extends the interactive capability between agents and within an enterprise by facilitating internal messaging communications and enabling agents to locate personnel within an enterprise for on-line support or customer query confirmation/support.

The management applications included are Configuration Manager where you can configure users and media flow, Information Manager where you can view real-time information and Report Manager, which handles historical data and reports.

With the integrated auto-attendant, Solidus eCare™ Lite offers dialed-number routing and greeting of customers with a welcome message specific for the Service Access.

Solidus eCare Lite

This feature provides a one-step menu for single entry-point contact centers. From a single-number entry point, the customer can select several services. Selection is followed by a Customer Identification Number (CID) being assigned, used with on-screen pop-ups on the agent's desktop.

InTouch – Extend your contacts beyond the Contact Center. For your corporate users and back-office workers, you can include Aastra InTouch users in Solidus eCare™ Lite. With Aastra InTouch, agents can place and receive calls using a PC connected to an office LAN and enterprise server. Besides providing basic features such as placing and receiving calls, InTouch enables presence status management and corporate directory searches. Via InTouch, call center agents can find information about colleagues beyond the contact center, and easily locate specialists and key persons.
