

## Aastra MD Evolution Hotel

» Always providing a 5-star service

MD Evolution Hotel is a communication system specifically designed to increase the efficiency and userfriendliness of your hotel's management and reception.

Modular in size and offering a wealth of services, its capabilities and features meet your requirements in terms of comfort and call handling, while guaranteeing full control of costs and billing for the services offered.

Due to its open architecture and compatibility with tomorrow's standards and networks, this new generation system provides your hotel with integrated mobility (DECT standard), and access to the new technologies and applications that are specific to the hotel industry.

Choose the MD Evolution Hotel communication system and invest in a new generation system that can adapt to your future requirements.

You now have access to multiple management and reception services. For enhanced call monitoring, you can print an itemized call charge receipt anytime. The receipt indicates the room, number called (in full if necessary), date, time that the call began, length and cost.

### User-Friendly and Customized Call Handling

MD Evolution Hotel is a perfect communication tool, instantly providing information on the hotel telephone screen, such as the caller identity, customers called by their name and features of a given room. This data is displayed on the screen in real time, guaranteeing time savings for your staff at reception and consequently, more availability for your customers.

In addition to the voice message customization facility, all these functions allow your customers to benefit from enhanced call handling and enable you to increase switchboard productivity.

### Efficient Billing Management

MD Evolution Hotel optimizes your cost management practices, particularly via its integrated call charge system. You can therefore program the price for the call charge unit.

Free calls can be billed to the customer according to the length of the call. In addition, MD Evolution Hotel manages a second currency and displays it on phones with screens, and prints it on receipts.

### Increased Comfort for your Customers

MD Evolution Hotel provides several room service features to make your customers feel more at home. All customers can program their wake-up call from the room phone by following the voice prompts. At reception, you receive a printed acknowledgement for answered or un-answered calls. You may also choose to make the hotel telephone ring.

The Message Waiting feature is used to inform your customers that there is a message for them at reception. Customers are notified by an LED on the room phone, an icon on phones with a display and a spoken announcement when picking up the receiver.

### Integrated Mobility

MD Evolution Hotel allows both you and your customers to take advantage of the cordless telephony service integrated into the DECT standard. This system was specifically designed to adapt to new forms of organization and latest customer requirements.

With MD Evolution Hotel, hotel staff productivity is improved by immediate information exchanges and reinforced relations with customers. They can be contacted anytime and anywhere.

### Access to the New Technologies

The open architecture of the MD Evolution Hotel system supports connection to the hotel's IT system. The interconnection protocol authorizes data such as customer check-in and checkout, mini-bar, room status, telephone use, wake-up calls, and so on.

You now have access to multiple management and reception services.

## Technical Data

### Supported Telephone Sets

- Dialog 4223 + 1KPU hotel operator telephone
- Room phones
- Booth phones
